Standard Operating Procedure: Guest Room Cleaning Checklist

Document ID: SOP-CLN-01 Version: 3.2 Effective date: applies to all agency hotels

1. Purpose and scope

This procedure defines the minimum required steps for cleaning a guest room at any CleanSweep-managed hotel. It applies to all cleaning staff and is used by checkers as the basis for the room inspection score.

2. Standard cleaning sequence

- Enter room, open curtains and windows to ventilate for at least 5 minutes.
- Strip and remake all bedding; bathrobe and slippers replaced if soiled.
- Dust all surfaces top to bottom, including light fixtures and headboards.
- Clean and disinfect bathroom: sink, toilet, shower or tub, and mirror.
- Restock amenities: toiletries, coffee/tea set, drinking glasses, tissues.
- Vacuum carpets or mop hard floors, working from the far corner to the door.
- Empty all trash bins and replace liners.
- Final walkthrough: check for stains, missed spots, or maintenance issues.

3. Target cleaning times

These are guideline durations, not hard limits — quality takes priority over speed. A standard room should typically take 25-35 minutes. Deluxe rooms typically take 35-45 minutes. Suites typically take 45-65 minutes due to additional living space and furnishings.

4. Inspection and scoring

Checkers inspect a sample of completed rooms daily using the standard scorecard. A room scoring 80 or above is marked pass. A room scoring below 75 is marked fail and must be re-cleaned before the room is released to housekeeping status 'inspected'. Scores between 75 and 79 are logged as needs_rework at the checker's discretion.

5. Escalation

A cleaner with more than two failed inspections in a rolling 7-day window should be flagged to the hotel supervisor for a coaching conversation. Repeated failures across 3 consecutive weeks should be escalated to the head of supervisors for a formal performance review.
